Try to resolve content IDs extracted from these databases *DINA* 5. Extract DOIs from journal databases *ALEX* 6. Resolve extracted DOIs to book title *ALEX* 7. Session analysis on foreigners *RAY* 8. Session analysis on dean's listers *RAY* 9. Add category (ebook or journal) into dataset *ALEX* 10. Cleaning and analysis on extracted content title / search queries *RAY*

S/N	Things Discussed/Done	Remark
1.		EBSCO Host • We try to split into sub databases • Question: Aaron's email – treat NLEBK (EBSCO eBooks?) • Corrupted • 50,000 lines • Another problem: running search is time-consuming • Don't know if we still can progress with this • Maybe the librarian didn't put catalogue inside • DOI resolve session no to content ID • Marcedit – best bet identifier 035 • Aaron will get back to us • Most common type of patterns* • Start with EBSCO first • Ebooks is too hard • How often does that occur (the action – click on the page but never download) • Factiva finding • Retrieve session ID across all the students (July to Dec 2016) – Nur wants to match the GPAs
