Current Meeting

Description
Analysis is Good, but do Basics First - No matter how dirty the data is, and regardless of the limitations of the dataset, focus on what can be done rather than what you cannot do - Basic statistics and information on the dataset is not prepared, how do we know what sort of advanced analysis can or should be done?
Consider Using Medians - Predictive model based on Median timing is better than nothing at all - Use Squared Sum of Errors to determine model fit - Iteratively improving on a poor model is better than not having a model
