

**Date:** 23/3/2017  
**Time:** 1600-1700  
**Venue:** SIS Project Room 4.5

**Attendees:** Wang Tian Tong  
Prof. Kam Tin Seong

**Agenda:** To clarify the following:

1. Application of the MCI package in R

1	<p>Still WIP.</p> <p>Problem at hand: Although we successfully got the weightages (column "Estimates" under "Coefficients" in the output summary of mci.fit) and the composite value, once we pass the data to "<b>huff.fit</b>" function to calculate the market share, we have the below error:</p> <p>(where the <u>local market potential</u> is represented by the "Subzone Population" and the <u>location total</u> is represented by "Number.of.Books.Borrowed", and <u>the same error occurs</u> regardless of whether these two data frames <u>contain zero value</u>)</p>
---	--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------

The meeting was adjourned at 1900 hrs. These minutes will be circulated and adopted if there are no amendments reported in the next 24 hours.
