

TEAM V
 ANLY482 INTERNAL MEETING
 MINUTES 11

Date	10 March 2017
Time	16:00 - 16:35
Venue	SIS Level 5
Attendees	Team V: Andrew, Sarah
Agenda	1. Discussion on Cluster Analysis 3. Discussion on Association Analysis

S/N	Item Discussed	Remarks
1	Cluster Analysis	<ul style="list-style-type: none"> - We decided that K-means clustering will be a better choice. - We took a closer look at the CCC values generated in JMP. - Even though the optimal is 8 clusters, but we feel 6 is the best because after 6 clusters, there is a huge dip in the CCC value.
2	Association Analysis	<ul style="list-style-type: none"> - We discussed our readings on Association Analysis and feel that is quite viable. - We took a look at our data and found that the current structure it is not suitable for this analysis. - Sarah suggested that we will need to transpose the data before starting on the analysis.

S/N	Action Item	Action By	Deadline
1	Continue with K-Means Clustering	All	14 Mar 2017
2	Continue with Association Analysis	All	14 Mar 2017
