

# ANALY482 MEETING MINUTES WITH SPONSOR(S)

<b>Date:</b>	11 January 2017
<b>Time:</b>	16:30 – 17:30
<b>Venue:</b>	Library L3 Office
<b>Attendees:</b>	SMU: Dina, Song Rui Sponsor: Aaron, Nazimah
<b>Absentees:</b>	SMU: Lu Ning
<b>Agenda:</b>	<ul style="list-style-type: none"> <li>Clarify project scope</li> </ul>

S/N	Things Discussed/Done	Remark
1.	Project scope clash with another team	<ul style="list-style-type: none"> <li>We can do e books (the data will be a lot less)</li> <li>Rerun the request and see the pattern by yourself</li> <li>Click on the item that you already know the title (the data you're doing is one year late) temporary thing as well</li> <li>If the other way around, throw the URL in might not work – ISBN</li> <li>Digital object identifier – standard string for eBooks (DOI) – A lot of strings will be the URL especially for journals</li> <li>URL has the DOI then don't have to query sponsor, just feed them the DOI all the met</li> <li><b>Crossref</b> – they got APIs everything (<a href="http://www.crossref.org/">http://www.crossref.org/</a>)</li> <li><b>DOI – 10.xxx (each log is assigned to which publisher), ISBN, ESN</b></li> <li>Ezparse – <a href="https://github.com/ezparse-project/ezparse">https://github.com/ezparse-project/ezparse</a></li> <li>Don't crawl – sponsor will get into trouble</li> <li>Sponsor will check if there's API</li> </ul>
2.		<ul style="list-style-type: none"> <li>All the databases have different pattern (focus on a few) easiest to decipher and look at</li> <li>Find problems when you try to combine (some of the reports on the log list is not on the user list) – don't have match → therefore matching you'll find some issues</li> <li>Another issue: data won't be 100% clean → the hashed email may appear twice in the user side list (most 2 common records – student)</li> <li>Figure out the title</li> </ul>

<b>Item Due (Team)/Action(s)</b>
----------------------------------

Deadline: End of week
