Acceptance Presentation Feedbacks

1	Remove the word “integrated system” because the word “integrated” means nothing to the people you are presenting to
2	Irreconcilable balances, under/over-utilization is not something that our system solves. It is something OSL enforces that solves. We are not solving it
3	<p>Our x-factor is wrong.</p> <ul style="list-style-type: none"> • 4 x-factors are too much • X-factors require justifications and proof <ul style="list-style-type: none"> ○ Justification cannot be based on our opinions only, what we think may not be working, may actually be not as bad ○ Use the formulas and processes to do comparisons for accurate analysis • Wrong use of terms: data prediction is not the same as sensitivity analysis
4	<p>Schedule Metrics did not reflect progress(as shown in demo)</p> <ul style="list-style-type: none"> • If metrics are 100%, then system should be 100% functioning: UI not fully integrated, validations not completed <p>Bug Metrics:</p> <ul style="list-style-type: none"> • No action took is misleading, if there are bugs, actions taken will include resolving the bugs
5	<p>Demonstration</p> <ul style="list-style-type: none"> • Functions covered are very well done
