

Iteration 10

Date: 6 Feb 2015

Time: 12 - 3

Venue: SMU Labs Meeting Room 2.2

Attendees: Hakam, Min Xuan, Hye Ri, Gui Shi, Shi Kai

Absentees: Brindha (having fever)

Internal meeting agenda:

To be discussed / brought up	Remarks / Comments
Update regarding recent changes	

Discussed during meeting:

Updated client regarding current status of Marry.SG

Question1 from client:

Do people get wedding planners?

Answer:

Usually will do it by themselves due to cost, but those who are busy will get the planners.

Takes about a year to plan by themselves

Question2 from client:

How will be prepopulated?

Answer:

Through profile card. It will populate wedding hashtag, date, theme etc

Value of the Marry.SG:

A good start off tool for wedding couples to organize and get ideas what they need to do while planning

Value-adding:

Itinerary - Planning to make it nice to give out to guests and use on actual day

RSVP - It usually costs high to get outside, but couples will be able to use the card

Challenge: Learning curve of first users of graph paper

Text overlay:

Need to be ensured that text is styled

Comments on functional improvements:

Need to ask to real users (couples who are planning/planned wedding)

Currently looks good (to the client)

Some major feedback from users:

- Users feel internal scrollbars are annoying (similar to SMU Facility booking)
- Because there is no border line, ambiguous to see which functionality + button falls under
- Prefer card to be full page -> hard to be achieved through Graph Paper. One option is to have a button to enlarge the card to full size
- Some users did not know that they can scroll

We need help from client regarding the linkage with external site

Action Items:

#	Task	Assigned	Due date
1	Sync Timeline with Google	Shi Kai	After Midterm presentation

Minutes recorded by:

Seol Hye Ri
