

Date: 12 Feb 2018
Time: 7pm
Venue: SMU SIS MR 4-3

Attendees: Gerald Tan
Yeo Yi Xiang
Toh Yi An
Bertran Queck
Jamie Chew
Professor Alan Megargel

Notes:

1. Deployment to AWS - everything else working. But voice-to-speech improvement that we made isn't working due to issues in google lib with Git. Previously we did websocket, improvements made. went to use google client lib which worked on local host, but didn't work when deployed. Currently they did snapshot fix on Gitrepo, but need to wait for release before we can use it
2. Deployment on 12 Feb night in preparation for UT3
3. Admin dashboard, filtering by date - when we set the score/answering qns, there's a timestamp going into database. Usecase for dates - to show the scores within a certain timeframe. Do without date, do with current date. Compare how they fare during current session for the test.
4. Pre/post test - remove pretest, use ONE timed test. Keep the leaderboard (remove pre) for the purpose of the lab. Leaderboard for timed qns for competitiveness. Breakdown of individual qns scores across groups (what is the improvement) but it's not currently in the API yet.
5. At the end, display the question and answers - which you got correct and which is wrong.
6. Analytics dashboard - count in all intermediate intents.
7. sorted (by default most -> least), and also (least -> most).
8. month by year —> given month, monthly comparison
9. cluster analysis —> value to dialogflow and sponsor. cluster texts by groups and add to dialogflow's intent.
10. Handover document —> all administrative details that he needs to continue this thing, to add in credit card

The meeting was adjourned at 9pm. These minutes will be circulated and adopted if there are no amendments reported in the next three days.

Prepared by,
Jamie
