AGENDA OF MEETING		
Meeting Title Internal Meeting		
Date	07-03-2012	
Start Time	1530	
End Time	1830	
Called By Suriyanti		
Venue SIS GSR 2-2		
Attendees Glorya, Suriyanti, Yosin, Minh		
Objective Mainly to discuss on Rostering Logic		

PREPARATION FOR MEETING:

Please Read:	Please Bring:

ACTION ITEMS FROM PREVIOUS MEETING:

No	Action Item	PIC	Comment	Due Date	Status
1	System requirement gathering				

AGENDA TOPIC:

No	Agenda Topic	PIC	Due Date
1	Rostering Logic		
	Meeting with Prof Ben Gan on issue about supervisor (LTY?)		

MINUTES OF MEETING		
Meeting Title	Internal Meeting	
Date	07-03-2012	
Start Time	1540	
End Time	1841	
Venue	SIS GSR 2-2	
Invitee List	Glorya, Suriyanti, Yosin, Minh	
In Attendance Glorya, Suriyanti, Yosin, Minh		
Absent	-	

MEETING:

No	Subject	Decision
1	Draw Use Case	Input Flight Schedule Input Working Shift Input Arranged Schedule Edit Arranged Schedule Delete Arranged Schedule Simulate Case Scenario Update Database Input Factors
2	Simulation	 Use historical data and with statistics, come out with forecasted Simulation logic + rostering (simple reassignment if possible. If not, just error message for human to change the rosters) While Optimised Scheduling sis the best of the best scenario Input→ Simulate→Statistics Generated→ Forecast→ Run Simulation Logic→ PDF format extracted (Visualised Report "transcript", Business Evaluation)
3	Functionalities (TBC)	SimulateAssign Roster
4	Requirement of "Good Simulation" result	MC rate (+ reassign worker if possible / propose possibility of OT) Things to take into account: needed manpower + hrs, qualification on system (language, and position/status), available time, same row

Check allowable OT rate vs. input OR rate + count OT hrs + cost Count recalls (cost + time) Check if 12-hr break for full time workers is achieved Count MAC cost Count overlap hours Unused working hours (people + time) Down time (based on overlap + not fulfilled flight requirement) Number of break hours not given within 6hrs of work? + Which worker? Importing flight schedule and working shift together or separate Does he have the data as one or separate? Does he have the data as one or separate? Does he have the data as one or separate? Does he have the data as one or separate? Po you think a database is needed for the forecasted data (from historical data given)? Or just include the forecasted data in the report? Report generated after the analysis of real historical data will ap in visual format with charts/diagrams, instead of just table of dat However, these data 'might' be exported as PDF file. Simulation = analyse current rostering condition + uncertainties improvise the situation. How optimized is optimized that you expected? What is considered as a good simulation result to you? Certain scenarios/factors, do client wants us to allow them to us INPUT or have these factors in Database? MC (Leave New Manpower Sudden flight request (manpower) Flight cancellation Beginning Staff (-DB) New Worker (+DB) Flight delay rate MC (Medical Certificate) rate Weather condition Walking time Resigning staff New workers trained (update on existing Worker DB) Staff utilization rate MAC (Meal Allowance Compensation) Overtime rate Sudden demand from airline Lower productivity from newcomer Airline & related gates where it parks Airline specific requirement (eg. mother tongue) List of similar systems Minutes Vetting Rotation Minutes Vetting Rotation	8		
Check allowable OT rate vs. input OR rate + count OT hrs + cost Count recalls (cost + time) Check if 12-h break for full time workers is achieved Count MAC cost Count overlap hours Unused working hours (people + time) Down time (based on overlap + not fulfilled flight requirement) Number of break hours not given within 6hrs of work? + Which worker? Importing flight schedule and working shift together or separate Does he have the data as one or separate? Do you think a database is needed for the forecasted data (from historical data given)? Simulation = analyse current rostering condition + uncertainties improvise the situation. How optimized is optimized that you expected? What is considered as a good simulation result to you? Certain scenarios/factors, do client wants us to allow them to us INPUT or have these factors in Database? MC / Leave New Manpower Sudden flight request (manpower) Flight hour delay Flight cancellation Beginning Staff (-DB)	6	Data to request from Kevin	Flight scheduleFlight delay rate
 Check allowable OT rate vs. input OR rate + count OT hrs + cost Count recalls (cost + time) Check if 12-hr break for full time workers is achieved Count MAC cost Count overlap hours Unused working hours (people + time) Down time (based on overlap + not fulfilled flight requirement) Number of break hours not given within 6hrs of work? + Which 	5	Questions to Kevin	 Does he have the data as one or separate? Do you think a database is needed for the forecasted data (from historical data given)? Or just include the forecasted data in the report? Report generated after the analysis of real historical data will appear in visual format with charts/diagrams, instead of just table of data. However, these data 'might' be exported as PDF file. Simulation = analyse current rostering condition + uncertainties + improvise the situation. How optimized is optimized that you expected? What is considered as a good simulation result to you? Certain scenarios/factors, do client wants us to allow them to use INPUT or have these factors in Database? MC / Leave New Manpower Sudden flight request (manpower) Flight hour delay Flight cancellation Beginning Staff (-DB)
of check-in counter?, CSO can be CSA but CSA can't be CSO.			 Check that all flight requirements are fully filled Check allowable OT rate vs. input OR rate + count OT hrs + cost Count recalls (cost + time) Check if 12-hr break for full time workers is achieved Count MAC cost Count overlap hours Unused working hours (people + time) Down time (based on overlap + not fulfilled flight requirement) Number of break hours not given within 6hrs of work? + Which

No	Action Item	PIC	Comment	Due Date	Status
1	Include events into scheduled timeline	Suriyanti			
2	Research on possibility of exporting data as PDF format	Minh			
3	Meeting with Prof Ben Gan	Suriyanti			
4	Model – View - Controller	Minh			
5	Create draft proposal (headings)	Suriyanti			
7	Send client meeting agenda, information, and questions that we will ask	Suriyanti			
8	Please ensure that you have NetBeans, Ms Access, Visio Paradigm, and Ms Project.				
9	Project logs	Yosin	Bug tracking, risk and others		

CARRY-OVER ITEMS FOR NEXT MEETING:

NOTES:

No	Subject	Description
1	Split project write up	
2	Project write up on logic	
3		

Prepared by,	Vetted and edited by,
Suriyanti	Yosin, Glorya
