🗣 Discussion topics

Agenda	Action By
Frontend Suggestions	

• With regards to the Mid-term presentation, Prof Jisun suggested that the team could choose shorter time period for the demonstration
• Speed on the Frontend side doesn't matter at this stage
   • Can still work with the brute force method
• Currently, the team is testing on the database, and it takes around 15 seconds for the frontend side to load
   • The time will be reduced according to the filters
 	
Prof Jisun's suggestions:
 	
• Connecting the dashboard to the MongoDB search feature
• There is little time for SEO (Search Engine Optimization) and any other complicated functions
• Try to add a UI to show that the search is still running/loading at the moment
• Limit functions to selecting data based on one month, then search for keyword
   • 14-16s buffer time for real system is acceptable
   • Can show progress bar when retrieval is ongoing
   • For real demo, select a shorter date range and connect to MongoDB's basic search
• Having a search function would be good for the project

Backend Suggestions	

• tmux, allows the terminal to continue running without keeping it open
• similar to screen?
   • Creates a virtual window which continues to run even after being disconnected to the server
   • Suggestion: creates a new screen, then creates a model, then detaches it
• Main focus is integrating the modules, and creating a running application
